

## deploy on heroku

---

create an account on heroku and install toolbelt

Create an account on [heroku.com](https://heroku.com)

TODO: Explain how to install heroku toolbelt

```
cd dial-a-device
heroku login
```

create your app on heroku

- `heroku create yourappname`
- `heroku labs:enable user-env-compile`
- `heroku config:set BUNDLE_WITHOUT="development:developments3:test:localserver"`
- `heroku labs:enable websockets`
- `heroku addons:add sendgrid`
- `heroku config:add BUILDPACK_URL=https://github.com/ddollar/heroku-buildpack-multi`
- `heroku config:add LD_LIBRARY_PATH=/app/vendor/openbabel/lib`
- `heroku config:add SMTP_SENDER=me@yourappname.herokuapp.com`
- `heroku config:add SMTP_HOST_LINK=yourappname.herokuapp.com`
- `git push heroku master`
- `heroku run rake db:migrate`
- `heroku run rake db:seed`
