deploy on your local server

Customize your parameters (mail server, ldap, storage) in:

- ```
  localserver.env
  ```

Create the background service

- ```
  rvmsudo foreman export upstart /etc/init -e localserver.env -a dial-a-device -u yourusername
  ```

Enable port forwarding

- ```
  iptables -t nat -A PREROUTING -i eth0 -p tcp --dport 80 -j REDIRECT --to-port 5000
  ```

Make iptables permanent

- ```
  sudo su
  ```
- ```
  iptables-save > /etc/iptables.conf
  ```

- ```
  nano /etc/network/interfaces
  ```

```
-- add this line after each adapter:
```
- ```
  post-up iptables-restore < /etc/iptables.conf
  ```
